WHAT MAKES THIS FENCE SUPERIOR?

SureLock Technology

Have you seen privacy fences with gaps and missing panels? At Superior, we never want to see that. We want to make sure that your fence is **secure** and well-built from the get-go. That starts at our factory with our **SureLock** interlocking picket design. SureLock ensures that your privacy fence panels “stick together” through thick and thin. No wind whistling or light shining through cracks—just a tight finish that says you chose **quality**.

Space Age Gate Blocks

Open. Shut. Open. Shut. **SLAM**. It's no surprise that gates are the most stressed part of your fence. Over time, constant gate movement can pull posts out of alignment or the gate will begin to sag under its own weight due to the use of an aluminum frame.

Manufacturers have tried various solutions to this problem, but Superior has discovered a unique material to support its gate posts. **HDPE** (High Density Polyethylene) is flexible material that remembers its original form and snaps back into place, even after years of opening and shutting. Unlike heavy aluminum, which can drag and sag over time, or plastic blocks that de-form after years of continual motion, HDPE is the **space age** material that keeps your gate as strong as the rest of your fence.

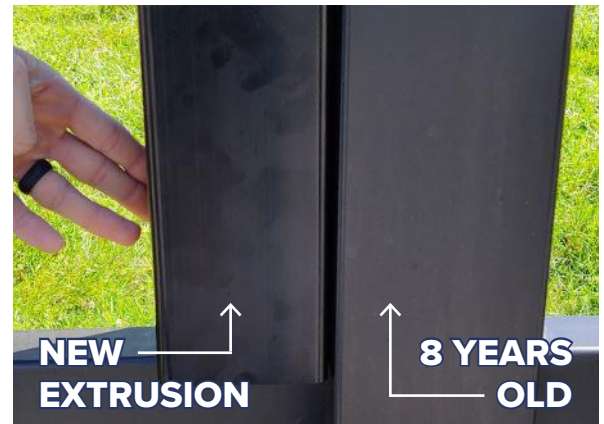

TitanShield Color Protection

Superior's color formulations, whether black, almond, or clay, are some of the strongest in the industry. Our color is not a laminate or paint, it's a **coextruded vinyl cap** that's full of rich color and mixed with our **TitanShield** color protection.

But of course, a photo is worth more than any words or promises. Here is **8 years** of weathering next to a brand-new piece of Superior's black vinyl. You can barely see a difference!

Forget the Filler

Fillers are just that. Filler. They offer no benefit to the fence; they simply take up space and replace more valuable (and pricier) ingredients in the vinyl "recipe."

Superior doesn't use much in the way of filler. We prefer to fill out our vinyl recipe with ingredients like **TiO₂**, which keeps whites shining and bright, or **impact modifiers**, which help the vinyl resist brittleness, so it doesn't crack or break with moderate impact.

Manufacturers who concoct cheap vinyl formulations might be able to offer a slightly less expensive product up front, but **the story of quality is told over time**. Superior's quality formulations mean your fence is going last—and look good—for a very long time.

Lifetime Warranty AND Labor Warranty

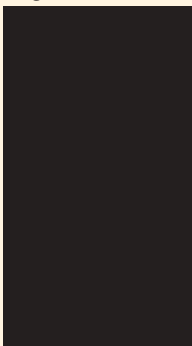

Imagine you file a warranty claim for a section of fence that failed. After reviewing your claim, the manufacturer agrees to replace the fence. But the bad news is: you're still going to have to **cover the cost** to have your installer come back and put it in.

Not with Superior. We know that labor is an important part of replacement, so we provide a **five-year prorated labor warranty** on our fencing. If it needs to be replaced, we'll pay all or part of the cost to replace it, for the first five years you own the fence!

Lifetime Material Warranty for White, Tan, and Almond products (with an acceptable weathering tolerance of 1.5 Delta E).

A unit of 1 Delta E means the colors being compared can barely be differentiated by the human eye.

On the other hand, a Delta E unit that falls between 3 – 6 means the colors are visibly different, but still an acceptable match in commercial reproduction.

Original Color	ΔE -Color Change
